All types of unpainted or painted interior substrates: plaster, plasterboard, gypsum tiles, concrete, cement plaster, agglomerates, cellular concrete, bricks, terracotta, etc.
 The finish, after complete drying of the filler, can be executed with all types of paints, gypsum-based coatings, pasty coatings, varnished paper glue.

REBOUCHER PRO - POWDERED WALL FILLER

2. INSTALLATION

SURFACE PREPARATION

Application surfaces must be clean, dry, sound, hard and free of dust and any traces of oil.

Open the slots correctly.

MIX PROPORTIONS

Usually about 2 parts Reboucher Pro filler to 1 part water.

Ideal mix:

- 2.75 litres of water per 5 kg bag.

APPLICATION.

Application is performed with a spatula.

3. PRECAUTIONS FOR USE

The temperature during application and during drying must be between 8 and 35°C.

Do not apply on a damp surface. Do not use filler that has already begun to harden.

4. CONSUMPTION AND DRYING

CONSUMPTION: 1 kg / m² / mm thickness.

DRYING TIME. It depends on the environmental conditions, the type of substrate and the thickness of application. As a general rule, for 1 cm thickness, the putty will dry in 6 hours.
